GEP QUICK DRY

Available in:

30 Lbs. Bag

5 Lbs. Pail

GEP Quick Dry is a granular product designed to absorb any spill . It is easy to apply as it can be spread by hand over the spill and worked in to it. It contains 52% cellulose and 48% clay. The clay makes the product heavy enough to be used outdoors as it stays down even under windy conditions. The cellulose content adds more absorption power to the product. The result is that GEP Quick Dry has absorption capacity twice of regular clay products in the market. GEP Quick Dry is environmentally friendly and contains no silica dust.
