

Multi Oil Skimming System (M.O.S.S.)

VIKOMA

Protecting our environment over 50 years

A versatile oil spill recovery package for fast reaction to spills

- Multi purpose skimming system
- Capable of handling a wide range of oil viscosities
- A versatile system consists of four Vikoma skimmers
- Easy to transport and ideal for emergency response operations
- Complete containerised package

The M.O.S.S. system has been designed to offer a complete packaged oil spill recovery solution that is easily portable, will recover oil with a broad range of viscosities and will allow fast reaction to spills in remote or difficult locations.

This versatile system comprises of four Vikoma skimmers, packaged together with a transfer pump, powerpack and hose kits, all supplied and stored in purpose built aluminium storage and transportation container.

The complete containerised system is designed to be easily transported and unloaded for immediate use making it ideal for use in emergency situations.

The range of skimmers enable recovery of a wide range of oils in differing scenarios, while the pump and powerpack can drive any of the skimming units.

System includes:

Komara Mini Disc Skimmer - a compact, lightweight, oleophilic disc skimmer, designed to recover floating oil from the water.

Komara Midi 2 Brush Skimmer - designed to operate in very shallow waters as well as in typical offshore

environments. It can be supplied with interchangeable disc and brush modules.

Delta Suction Weir Skimmer - a robust, lightweight skimmer head, ideal for use in very shallow water or confined, less accessible areas. With no moving parts it is virtually maintenance free. Due to it's flat shape the skimmer can be used in difficult ares such as under piers and jetties.

Weir Skimmer - a portable weir skimmer for calm or sheltered waters. The simple, central height adjustment enables it to be set to varying depths of oil or effluent.

Floating Pump - a lightweight, compact unit which operates close to any of the skimmers, enhancing performance via a reduced suction hose length. The pump unit will float in very shallow water and so any skimmer/pump combination is ideally suited to coastal, river or marsh land applications.

Powerpack - portable, lightweight and can be easily transported in two parts. The powerpack will provide power for driving any one of the four skimmers with pump combination.
