A weir skimmer for recovering oil in enclosed tanks or open environments

- Capable of withstanding harsh industrial environments
- Units are built of high grade stainless steels and alloys
- Can deal with a range of scenarios and skimming capabilities
- A floating weir skimmer

The Vikoma Dragonfly Mini skimmer is a floating weir skimmer capable of recovering many types of oil from the surface of lakes, rivers, harbours, sheltered sea areas and also many industrial localities. It can be used in open environments or closed tank applications.

The depth of the circular weir is controlled by a float unit situated in the oil collection trough.

The Dragonfly Mini skimmer can be supplied with a variety of different transfer pumps in order to meet the operator's requirements:

- Diesel driven
- Electric driven
- Pneumatic
- Hydraulic driven

The Dragonfly Mini skimmer can also be attached to a vacuum tanker for skimming operations.
