The Vikoma Weed Skimmer is a weir skimmer designed for the recovery of weeds and grasses in ponds, lakes and rivers.

Weeds such as duckweed or water fern can be a big problem for ponds. Weed growth can cover the entire surface of a pond or lake if not managed, blocking out light to submerged aquatic plants and can also lead to reduced levels of oxygen in water which is a problem for fish and other wildlife.

Our floating weed skimmer is an easy way to remove excess weed and clear the water surface. Weeds are recovered by the skimmer's weir action and collected into an efficient filtration system, draining the water for return to the pond, lake or river. Collected weeds can then be composted or disposed of as desired.

The skimmer can operate in shallow or deep water. The compact design allows the system to operate in small as well as large areas and it is suited to any calm water.

The buoyancy floats are made from a strong and durable plastic. The system comes complete with a Vikopump rated at 17m³ per hour. The Vikopump has remarkable suction capabilities, can self prime and can also run dry for short periods. The pump can therefore be used for other duties needing liquid transfer. The pump is capable of passing large pieces of debris without clogging. The system comprises a suction weir skimmer

VikoPump with hoses, coupling and floats and an in-line filtration system.

Product benefits:

- Robust
- Ideal for shallow or deep waters
- Quick set up
- Simple to operate
- One person operation

Maximum Recovery Capacity

Up to 17m³ per hour

System Components

Vikoma weed skimmer head
Diesel driven V164D Transfer pump with spark arrestor and Automatic overspeed shutdown
Weed filtration system
Hose kit

Optional Extras

Spares Kit
Extension hoses
Additional filtration bags
